

PROXAN®-PR 4

Special cleaner

Uses

PROXAN®- PR 4 is a special cleaner used for cleaning metallic tools that are contaminated with sealant residues which have not yet cured. It is also suitable for cleaning and degreasing joints.

Properties

- Quick and easy to use
- Suitable for cleaning tools and joints

Application instructions

Application

PROXAN®- PR 4 is used to clean metallic tools to which unhardened PROXAN® joint sealant residues have adhered. Depending on the degree of soiling, place tools in the cleaner and clean with a rag, or apply the cleaner directly to a rag and remove the soiling by rubbing. When used on plastic or coated components, check whether the surface is damaged. Hardened sealant residues swell when cleaner is applied and can then be removed mechanically. The cleaner is also suitable for cleaning and degreasing joints. Do not store rubber components (seals) in PROXAN®- PR 4 as they become unusable due to swelling.

Storage

Dry, at temperatures below +25 °C; do not store near radiators. Avoid direct sunlight on the packaging.

Form of supply

Metal flask 1.0 l: 10 flasks per box PE canister 10 l
